

Ride experience

Queue and theme

The queue is themed after a traveling exhibition show by the fictional Ornelas Brothers at the park's County Fair called "The Wrath of Rakshasa." With carnival-style posters to fit the park's County Fair themed area, the show presents an "unusual collection" of artifacts, informational boards, and statues related to the mythical [Rakshasa](#), a shape-shifting demon from [Hindu](#) mythology. It thematically complements the adjacent [Demon](#) roller coaster.^{[16][26][27]} The ride's exit leads riders into the Rakshasa Relics store.

Layout

The train going through the barrel roll element.

After exiting the station, trains on Wrath of Rakshasa climb the 180-foot-tall (55 m) lift hill. At the top, riders take a small left turn and stop, while the train is tilted to peer over the edge. After a brief pause, riders plunge 171 feet (52 m) at a 96° beyond-vertical angle, reaching speeds up to 67 mph (108 km/h). Afterward, riders ascend into an [Immelmann loop](#), followed by a [dive loop](#). The train then traverses a [zero-g roll](#), turns down and to the right into an element resembling the demonic knot on [Flug der Dämonen](#) at [Germany's Heide Park](#); this consists of a [corkscrew](#) above a [barrel roll](#) separated by a 270° turn. This is followed by a 180° turn to the left, then a 360° helix into the final [brake run](#).^{[7][28]}

Characteristics

Track

An overview of Wrath of Rakshasa.

The steel box track of Wrath of Rakshasa is 3,239 feet (987 m) long and the lift is 180 feet (55 m) high, with a drop of 171 feet (52 m).^[7] The track of the roller coaster is painted blue with gold colored supports.^{[29][30]} The ride's track—specifically its inversions—are built over and interact guest pathways multiple times.^[30]

Train

Wrath of Rakshasa operates three fiberglass trains with three cars per train. Each car seats seven riders in one row, with a total of 21 riders per train.^[7] Utilizing B&M vest restraints, the train features a maroon and gold color scheme.^[31]

Station

Bins on the station's conveyor belt system hanging over the track.

The station features a [conveyor belt](#)-like bin system that goes over the roller coaster's track, taking loose articles from the loading side to the unloading side. This system is based on the one used on [Yukon Striker](#) at [Canada's Wonderland](#).^{[16][32]}

Records

Upon the opening of Wrath of Rakshasa on May 31, 2025, it broke two records specific to the Dive Coaster model. It has the steepest vertical angle drop on a Dive Coaster at 96° (surpassing [Dr. Diabolical's Cliffhanger](#) at [Six Flags Fiesta Texas](#) and [Iron Menace](#) at [Dorney Park & Wildwater](#)

[Kingdom](#)), and has the most inversions on a Dive Coaster with five inversions (surpassing [Yukon Striker](#) at [Canada's Wonderland](#)).^[33]
